

GarageLog — All Your Vehicles

Beta Tester Guide

Thanks for helping me test GarageLog! Here's everything you need to get started.

Getting Started

1. **Download TestFlight** from the App Store (it's free — it's Apple's official beta testing app).
2. Open the invite link I sent to your email, then tap **Accept**.
3. Tap **Install** to download GarageLog.
4. Open the app and follow the short welcome tour.

App at a Glance

- **Add your vehicles** — Cars, trucks, motorcycles, boats, tractors, and more. Add a photo or pick a color icon.
- **Log services** — Record oil changes, tire rotations, brake jobs, inspections, and dozens of other service types in a few taps.
- **Set reminders** — Tell the app when you're due for a service (by mileage, by time, or both) and it'll keep you on track.
- **Track your mileage** — Log odometer readings to keep your mileage accurate and reminders sharp.
- **Service history** — A full timeline of everything you've logged for each vehicle.
- **Dashboard** — See what's overdue, due soon, and coming up — all in one place.

About Pro Features

You have access to all Pro features in this beta — at no cost.

GarageLog has a paid Pro upgrade. As a beta tester, you'll be able to unlock all Pro features by going through a **simulated** purchase flow built into the app. **No real money is involved — you will not be charged anything, and no payment information is required.**

You'll encounter upgrade prompts as you use the app in Free mode — evaluating those prompts is part of the testing! When you're ready to unlock Pro, tap through the upgrade flow and confirm. The app will recognize you as a beta tester and grant access immediately.

Pro features include: unlimited vehicles, unlimited reminders, customizable service types, vehicle photos, and iCloud sync.

Things to Try

Use the app the way you normally would — the goal isn't to rush through a checklist, it's real-world use. The items below highlight areas worth exercising, roughly in order. **Please spend time in Free mode before upgrading** — once you upgrade you can't go back, and the Free experience is something I specifically want your feedback on.

In Free mode first:

- Add 2 of your real vehicles, log some recent services, and enter odometer readings.
- Set reminders using different trigger types — by mileage, by time, and both — then check the Dashboard to see how they appear.
- Intentionally try things that hit the paywall: add a vehicle photo, create a custom service type, and attempt to add a third vehicle. **Note how those upgrade prompts feel** — that's valuable feedback.
- Explore Settings: try the different themes and text sizes.

After going through the simulated Pro upgrade (no charge):

- Add a vehicle photo and a third vehicle; create a custom service type or custom field.
- Log a service and attach a receipt photo using the camera or your photo library.
- Edit a vehicle — swap its photo, change the color icon — and update a previously logged service.
- If you have a second Apple device on the same iCloud account, add something on one and verify it appears on the other.
- If anything feels confusing, broken, or just “off” — that's exactly what I want to hear about.

Questions / Things to Consider

After you've had a chance to use the app, I'd love your thoughts on the following. Feel free to answer as many or as few as you like — any input is helpful.

- **Dashboard:** Does it present the information you'd want and expect to see when you first open the app? If not, what would you expect?
- **Ease of use:** Did you find it easy to add a vehicle, log a service, and set a reminder? If not, what could make those flows more user-friendly?
- **Upgrade prompts:** When you hit an upgrade prompt in Free mode, was it clear what you'd get by upgrading? Did it feel reasonable, or did it feel pushy?

- **Free mode:** Was the available feature set sufficient to make the app genuinely useful? Did you find the small banner ads intrusive? Anything you'd change about the Free experience?
- **Pro mode:** Did the additional Pro features feel useful? Would you consider them worth paying for? Do you think \$6.99 is a reasonable price for the upgrade?
- **Reminders:** Did reminders fire when you expected? Was setting them up intuitive, or did anything about the configuration feel unclear?
- **Future features:** Keeping in mind that the Pro feature set will soon include a reporting / insights feature (cost breakdowns, how well you're staying on top of services), what are the top 2–3 *other* features you'd most want to see added? Would you make them Free or Pro features?
- **Friction points:** Was there any moment where you weren't sure what to do next — where a hint, tooltip, or better label would have helped?
- **Stability:** Did the app feel solid? Any crashes, freezes, or anything that felt broken or unexpected?
- **iCloud sync** (if applicable): If you tested on more than one Apple device under the same iCloud account, did sync work as expected?
- **Anything else:** Other critiques, impressions, or suggestions are always welcome.

Sending Feedback

From the app (recommended):

- Open the app, go to **Settings**, and tap **Send Feedback** to share general thoughts or ideas.
- Tap **Report a Bug** to send a detailed bug report — it automatically attaches diagnostic logs, which is a huge help for tracking things down.

Via TestFlight:

- **Found a bug with a visual?** — Take a screenshot (press the Side button and Volume Up at the same time), then tap the preview that appears in the corner. TestFlight will give you the option to send it as beta feedback with a note.
- **No screenshot handy?** — Open the **TestFlight** app, tap GarageLog, then tap “Send Beta Feedback.”

If you can, mention what iPhone model and iOS version you're on.
